PREFACE

The Inventory of Federal Archives in the States is one of the products of the work of the Survey of Federal Archives, which operated as a nation-wide project of the Works Progress Administration from January 1, 1936 to June 30, 1937, and has been continued in Mississippi since that date as a state project of that Administration.

The plan for the organization of the Inventory is as follows: Series I consists of reports on the administration of the Survey, acknowledgments, and general discussions of the location, condition, and content of federal archives in the states. Succeeding series contain the detailed information secured by workers of the Survey, in inventory form, a separate series number being assigned to each of the executive departments (except the Department of State) and other major units of the Federal Government. Within each series No. 1 is a general introduction to the field organization and records of the governmental agency concerned; the succeeding numbers contain the inventory proper, separate numbers being assigned to each state in alphabetical order. Thus, in each series, the inventory for Alabama is No. 2, that for Arizona No. 3, that for Arkansas No. 4, etc.

For each local office information regarding each series, or unit of related records, is presented in the following order: title, inclusive dates ("to date" indicating an open file at the time the information was secured), general description of informational content, description of the system of filing or indexing (if any), a statement of frequency and purpose of use, form of the record itself (bound volumes, sheets in folders, etc.), linear footage, description of the containers, physical condition of the records (not stated if satisfactory), location by room number or other identifying information, and finally, the number of the Form 58SA on which this information was originally recorded by a Survey worker and from which it was abstracted for the Inventory. This form is on file in The National Archives. When it contains substantial information on addenda sheets which has not been included in the mimeographed abstract, indication of this is given by use of the reference "See addenda."

In Mississippi the work of the Survey was under the direction of Mr. Stanley C. Arthur, regional director for Arkansas, Louisiana, and Mississippi, with Mr. George E. Schilling as state supervisor, until June 30, 1937. Since that time Mr. Schilling has been in charge of the state project. This inventory of the records of the Department of War in Mississippi was prepared in the New Orleans office of the Survey under the direction of Mrs. Norris Fazekas, editor-in-chief and assistant state supervisor, and was edited before final typing by Dr. Henry P. Beers of the Division of War Department Archives of The National Archives.

The date of establishment of this office, or a previous agency from which the present establishment evolved, is not known. However, our records show that the agency, under its present title, was established October 7, 1929. This probably marks its last administrative reorganization, and reorganizations previous to that date are not known. The survey of archives conducted at the agency reveals records dated as early as 1804. Whether these early records originated from a private or state source, or whether they were originally prepared by a federal agency, cannot be determined.

This agency occupied quarters in the Victoria Building, Eighth and Locust Streets, St. Louis, Mo., from October to November 1929, when it moved to its present address in the Vicksburg National Military Park.

Locations prior to 1929 are not ascertainable. This office has supervision of the engineer offices in the Lower Mississippi Valley Division. All records have been retained, none has been lost or destroyed, and none is sent to Washington unless requested.
