LETTER OF TRANSMITTAL

COMMONWEALTH OF KENTUCKY DEPARTMENT OF EDUCATION FRANKFORT

To The General Assembly
and Governor of the
Commonwealth of Kentucky:

In compliance with Sec. 4389 of the Kentucky Statutes, I submit herewith the report of the Superintendent of Public Instruction for the biennium ended June 30, 1933.

The report is given in three parts: Part I, the Statement of the Superintendent of Public Instruction; Part II, Reports of the Directors of the Divisions of the State Department of Education; and Part III, Summary of Statistical Tables and detailed Financial and General School Statistics for the individual school districts of the state.

In view of the crisis now confronting public education in Kentucky, it is urged that special attention be given to the discussion of the conditions described in Part I.

Respectfully submitted,

JAMES H. RICHMOND
Superintendent of Public Instruction

January 2, 1934

PART I
STATEMENT OF THE SUPERINTENDENT OF
PUBLIC INSTRUCTION

INTRODUCTION

The biennium ended June 30, 1933, was of great significance to the public schools. The financial depression, the full force of which was felt by the nation in the fall of 1929, reached its greatest depth in Kentucky during this biennial period. At present the outlook is bright for economic recovery in both state and nation; however, the manner in which schools are supported in Kentucky will cause the year 1933-34, the first year of the biennium of 1933-35, to be one of the darkest in the school history of the state. While it is not the purpose of this report to treat directly school conditions other than those of 1931-32 and 1932-33, it will be necessary from time to time to refer to the preceding biennium and to the first half of the year 1933-34, for the purpose of showing certain trends in evidence during the biennium covered in this report.

The full effect of conditions which began to develop as early as 1930-31 will not be felt for some years to come. A casual study of school expenditures for 1931-32 would make it appear that the effects of the depression were not in evidence at that time in Kentucky, when, as a matter of fact, conditions in the state as early as 1930, pointed to a collapse of the public school system within a few years, unless the people could be aroused to the imperative necessity of adequate support for the schools. Accordingly, a program was launched for the improvement of educational conditions in Kentucky, a program which has already done a great deal in making possible the maintenance of standards of our present school system and in paving the way for a new era of public education in the state. This program will be discussed briefly in the report under the heading "The Kentucky Educational Commission".

A complete description and analysis of school conditions during the biennium just ended would require more space than the limits of this report will permit. Furthermore, the report of the Kentucky Educational Commission furnishes an exhaustive analysis of school conditions in the state during the year 1931-32 and, to a limited extent, those in 1932-33. It shall be the purpose of this Biennial Report, therefore, to consider briefly the more significant phases of the public school program and the work of the State Department of Education during the past biennium.

The first division of this report will be devoted to a discussion of:

- (1) the problems of operating the schools during the depression, (2) the functional reorganization of the State Department of Education, (3) the services performed by the State Department of Education, (4) the Kentucky Educational Commission and (5) the necessity for increasing the Common School Fund.

OPERATION OF THE PUBLIC SCHOOLS DURING THE FINANCIAL CRISIS

Decrease in financial support.—The total revenue from both state and local support received by the public schools of the Commonwealth was \$20,860,000 in 1929-30, aside from borrowed money and bonds. This was increased \$550,000 in 1930-31. Since 1930-31 the support of public education has declined. In 1931-32, the first year of this biennium, the decline was \$237,000 from the total for 1930-31; in 1932-33 the decrease was considerably greater, the support for that year being \$3,183,000 less than for 1931-32. This represents a decline of 15 per cent in public school revenue in one year.

The amount of state support of public education expressed in dollars per pupil in the school census is called the state per capita. For 1929-30 the state per capita was \$8.15; in 1930-31 it was \$8.75. In 1931-32 it reached a maximum of \$9.00; but in 1932-33 it declined sharply to \$7.00. For the state as a whole local support of public education constitutes more than 70 per cent of the total. Although the state revenue in 1931-32 slightly exceeded that for 1930-31, due to the greater decrease in local revenue for 1931-32, the total support for 1931-32 showed a decrease. In 1932-33 there were sharp declines in both state and local revenues, resulting in a net decrease of over \$3,000,000 as has been pointed out.

The decreases in revenue are attributable to the decreases in property valuations in the various districts and to increases in tax delinquencies. A part of the school revenue is derived from franchise taxes on miscellaneous corporations and railroads. Since the earning power of these corporations has been greatly reduced, the value of franchises has likewise decreased.

Although for the Commonwealth as a whole the state support of public education constitutes less than 30 per cent of the total, this percentage is far from true for the different types of school districts. For the city districts of the state in 1931-32, state support was 18.7 per cent of the total; for the graded school districts this per cent was 23.8; and for the county school districts collectively the state support was 40.3 per cent of the total. In more than one-third of the county districts of the Commonwealth the revenue for the public schools from state support exceeds the public school revenues obtainable by local taxation. This means that in these rural areas of Kentucky, wherein reside more than 200,000 school children, public education is largely dependent upon the support afforded through the State Per Capita Fund.

Since the rural sections of the state are more dependent upon the state support than are the cities and centers of population, the reduction from \$9.00 per capita in 1931-32 to \$7.00 per capita affected them more than it did the cities. Moreover, the proportionate reductions in revenue from local taxation were also greater for the rural sections.

These reductions in revenue in the county districts were not due to changes in the local tax rates for schools. The average school tax rate in the county districts in 1930-31 was 61.2 cents; in 1931-32 it was 62.1 cents; and in 1932-33 it was 61.5 cents. These figures show a variation of less than one cent in the mean or average tax rates. School tax rates have held up remarkably well throughout the state. It should be noted that on the average tax rates are higher in the less favored rural sections of the state than they are in the state as a whole. In 1931-32 43 out of the 120 county districts of the state were able to raise less for public education by local taxation than they received from the state common school fund. In these 43 counties the average school tax rate was 67 cents compared with the 62 cents average for the 120 counties.

Increase in enrollment.—The total district enrollment of the public schools of the state for 1931-32 was 613,119; the corresponding enrollment for 1932-33 was 622,115,* representing an increase of 8,996 pupils in one year. The enrollment in the city school districts of the state decreased 1,800 pupils while the enrollment in the county schools increased 10,800. This indicates a distinct movement of population from the cities to the rural districts and adds materially to the public school burden of the less favored areas of the state.

Shortened school term.—The decreased support for public education is becoming apparent in the reduced quantity of educational opportunity afforded the children of the state. In 1930-31 and 1931-32 no school districts of the state operated on a term of less than seven months in length. In 1932-33 at least three county districts were forced to reduce the length of the elementary school term to six months. Reports for 1933-34 now in show that at least thirty of the county school districts of the state are operating their elementary schools for only six months.

Lag of school revenue receipts.—Not only has the amount of money available for public education been greatly reduced in the last two years, but the time in which it has become available for use has further hampered the operation of the schools. In 1931-32 and preceding years approximately 75 per cent of the receipts into the state school fund were realized during the two months of September and January. In 1932-33 the two months of largest receipts were November and March. In 1931-32 41 per cent of the receipts into the Common School Fund were realized prior to November first; in 1932-33 only 12 per cent of the receipts into the Common School Fund were realized prior to November 1, 1932. This situation has been brought about by extension of time for payment of state and county taxes. By an Act of the General Assembly of 1932, the discount and penalty dates for payment of taxes were advanced sixty days.

*The State enrollment for 1932-33 was 607,517. This smaller figure excludes the duplicates recorded in one or more school districts of the State. In previous enrollment figures duplicates have been included.

Local revenue receipts in the county districts has lagged two months behind the local revenue receipts for city districts. In 1932-33 in the city districts one-half of the local revenue receipts were available in December; while it was not until sometime in February that county school districts had received as much as one-half of their local school revenue. Since more than 75 per cent of the school revenue expended annually goes for teachers' salaries, it is obvious that the lag of revenue receipts has delayed salary payments due the already inadequately paid teachers in the rural sections of the state.

Decrease in teachers' salaries.—Teachers' salaries in Kentucky have always been low in comparison with other states. The state average salary for all public school teachers was \$934 in 1930-31; in 1932-33 it was \$726, a decrease of 22 per cent. In 1931-32 the average annual salary paid the 9,970 elementary teachers in the county schools was only \$564. For the corresponding group of 10,070 teachers in 1932-33 the average salary was \$459.

Decrease in capital outlay.—Due to the reductions in school revenue, curtailment of certain types of expenditures has taken place. The most noticeable of these has been in capital outlay. Expenditures for capital outlay in 1930-31 totalled \$2,874,438; in 1932-33 the amount expended for this purpose was only \$589,315, representing a decrease of 80 per cent. Other classified expenditures that have been greatly reduced are: expenditures for materials of instruction 65 per cent, school plant maintenance 45 per cent, and auxiliary agencies 41 per cent.

Further reductions in 1933-34.—Support for public education in Kentucky, though very meager in 1932-33, is still further reduced in 1933-34. The state per capita which was \$9.00 in 1931-32 and \$7.00 in 1932-33 is only \$6.00 in 1933-34, a reduction of one-third in only two years. Indications are that education expenditures will be reduced in all types of school districts, but to a greater degree in those districts, the rural sections, where curtailment of support can least be afforded. Reports of the State Tax Commission indicate that property assessments, upon which taxes for the school year 1933-34 will be paid have decreased 15 per cent.

Protecting school funds.—As indicated in the introduction of this report, it became apparent as early as 1930 that the schools were in for serious financial difficulties. It was the opinion of Mr. Bell, then Superintendent of Public Instruction, and the other members of the State Board of Education that every precaution should be taken to safeguard and protect all school funds in the hands of public officials. Due to the fact that school funds had been lost occasionally prior to that date, through the defalcation of school treasurers and depositors and through lax business methods, the State Board felt that such conditions should be remedied once and for all. Furthermore, a preliminary check up had shown that the practice of

bonding school treasurers and depositories had been extremely lax; so the State Board of Education passed a regulation to the effect that each school district should require its treasurer and/or depository to execute proper bond for the faithful performance of the duties of the office or offices.

The State Board was fully aware of the fact that an adequate plan of safeguarding school funds would include also proper plans of collecting funds and recording and accounting for them. Subsequent developments have shown the wisdom of the Superintendent of Public Instruction and the State Board in the action taken. By January 1, 1931, approximately 25 banks in the state had temporarily or permanently ceased business. There were only one or two instances where public school funds were lost through the closing of banks and, in each of these cases, the local board of education had not yet complied with the regulations of the State Board.

An interesting chapter could be written on this subject, but suffice it to say that during the years following 1930-31 almost every treasurer and depository of boards of education have executed proper bond and there have been a relatively small number of instances where school funds have been tied up through the closing of a bank.

Bonds guaranteed by personal sureties have always been in the majority, but due to the fact that surety companies virtually ceased to guarantee public official bonds other than those for faithful performance of duties, the number of personal bonds has increased. This has been true even though collateral bonds are becoming more frequent. Collateral bonds are those where government bonds, state warrants, or state bridge bonds have been deposited as collateral for the protection of school funds.

Every effort has been made to see that boards of education live within their budgets and, as a result, practices of fiscal administration have been approved. As a means of improving fiscal policies, a comprehensive study was made of school indebtedness in Kentucky. As a result of this study, recommendations have been made looking toward decreasing, in the immediate future, the amount of floating indebtedness outstanding against school districts. Incidentally, the school debt problem in Kentucky is small when compared with other states. Exclusive of Louisville, the total school indebtedness in Kentucky is only slightly in excess of \$10,000,000. Only two states in the union have a smaller per capita school indebtedness.

Possibly what will be looked upon as the most significant plan of protecting school funds in Kentucky was inaugurated July 1, 1933. At that time a complete and comprehensive financial accounting and recording system was inaugurated. Through the consolidation of all financial problems under the direction of one person in the State

Department of Education a much better check can be made on fiscal policies in the future.

School economies effected.—On a relative basis, schools of Kentucky have held up as well during the depression as those in the great majority of the states. During 1931-32 and 1932-33 there were a few states in which there were fewer reductions in the length of the school term than there were in Kentucky. School tax rates held up remarkably well. All of which shows that every effort was made to provide for the children of Kentucky a reasonably satisfactory program of public education. Other sections of this report, however, deal with the factors which have brought the public schools almost to the point of a general breakdown.

It has been said the economies effected by the school administrators of Kentucky did much toward guaranteeing to taxpayers that educational dollars received maximum returns. Indeed, no agency of the state government has been called upon to effect as many economies as have the schools. In the spring of 1932, prior to the time of the preparation of budgets and salary schedules by district boards of education, the State Department of Education prepared a list of suggested school economies. This statement was approved by the State Board of Education. The necessity for preparation and rigid adherence to the school budget was pointed out. The importance of sound administrative procedure was stressed, and a list of several false economies was prepared. It has been reported that these suggested economies did much toward aiding local boards of education in solving their difficult financial problems.

The theme of the August administrators' conferences held in 1932 was "school economies." Conferences were held at the University of Kentucky and the four teachers' colleges. Several hundred school administrators were in attendance at these conferences. The importance of preparing and living within a school budget, desirable economies in instructional service, practical economies in the maintenance and operation of school plant, and economies possible in the general administration of the schools were stressed at these meetings.

In April, 1933, a more comprehensive list of suggested economies was prepared than the one prepared the preceding year. This statement dealt with preparation of the budget, economic buying practices, economies in instruction, economies in the operation and maintenance of plant, economies in school housing, and miscellaneous economies.

As pointed out above, the State Department of Education has put forth every effort to guarantee to the taxpayers that dollars spent on education shall receive maximum return. The rigorous insistence on the practices of economics as briefly outlined in this report is evidence of the attitude of the State Department of Education on this question.

THE FUNCTIONAL REORGANIZATION OF THE STATE DEPARTMENT OF EDUCATION

The State Department of Education was called upon to render an increased measure of service during the biennium. Indeed, the volume of work performed by the Department demanded that it be reorganized on a functional basis in order that it be in position to meet the demands made upon it. So vast was the amount of financial work to be performed, it became necessary to create a division of finance. Certain divisions performing kindred or parallel services were consolidated or coordinated while the activities of others were expanded.

According to the provisions of Section 4396-6 of Kentucky Statutes, the following divisions of the State Department of Education are included within the departmental organization:

1. Office of Superintendent of Public Instruction, with one Assistant Superintendent of Public Instruction, who is authorized to act in the absence of the Superintendent of Public Instruction.
2. Division of Statistics, School Records and Reports.
3. Division of Inspection and Accounting.
4. Division of Certification and Examination.
5. Division of Rural School Supervision.
6. Division of High School Supervision.
7. Division of Negro Education.
8. Division of Vocational Education.
9. The Superintendent of Public Instruction may provide for additional departments as efficiency of service to the state may demand, within the limits of the funds available for such service.

Under the provisions of "9" above, the following divisions have been added:

1. Division of Vocational Rehabilitation.*
2. Division of School Buildings and Grounds.
3. Division of Research.
4. Division of Finance.
5. Division of Teacher Training.
6. Division of Public Relations.
7. Division of School Library Service (added July 1, 1933).

These titles imply the type of service to be performed by the respective divisions.

The statutory set-up of divisions, including the newer divisions created in the reorganization of the State Department, may be analyzed and described in terms of the functional services which they render. On a broad basis, these services may be grouped into two main types of work performed by the staff of the Department:

*In September, 1933, the name of this division was changed to "Special Education."

- A. General Services.
- B. Special Advisory and Supervisory Services.

Under "A", there are three functions:

- I. General administration and supervision of the system of education within the Commonwealth, and the State Department of Education, in relation to the school system of the state.
- II. Promotion of the educational welfare of the children of the Commonwealth in providing leadership for the cause of education, and in interpreting to the public the actual work of the schools. This service has to do with publicity and the arranging of various types of local, regional, and state conferences in the interests of the advancement of education.
- III. Continuous study of state and local school problems through scientific research. This involves the systematic gathering of school data, the securing of superintendents' annual reports and various other kinds of school statistics. This type of service includes the making of surveys and the supplying of technical statistical advice and scientific direction on research projects carried out by members of the Department.

Under "B", there are two general functions:

- I. Advisory and supervisory services in relation to the educational administration of the schools and the problems connected with instruction. The two branches of this division include (1) the problems of the schools as instruments of education with their administrative and instructional facilities, and (2) problems with respect to the training and certification of teachers.

The performance of the functions under (1) demands a considerable amount of field work and, therefore, requires a number of supervisors, each of whom is professionally equipped for some special branch of supervision, as, for example, the Public School Supervisor, the Supervisor of Buildings and Grounds, the Supervisor of Vocational Training.

The functions covered under (2) fall into three divisions: (a) working with all institutions in the state which are engaged in the training of teachers in order to develop proper curricula for the various types of teaching positions needed in the state; (b) the setting up of proper principles for the certification of teachers and seeing to it that they are carried out in practice through the issuance of certificates; and (c) studying the problems of teachers in service to discover whether or not their

training is deficient and making proper arrangements for the continued growth of teachers in service.

- II. Advisory and supervisory services in relation to the financial administration of the public schools call for: (1) auditing and inspecting the records and accounts of school boards; (2) ascertaining whether the provisions of laws having to do with school finances are being carried out; and (3) advising with boards in the preparation of financial plans.

Another phase of this type of service calls for the keeping of accurate accounts of all funds used in the State Department of Education.

All of the types of services mentioned herein are necessary and essential to the carrying out of (1) the mandate of the State Constitution—

“The General Assembly shall by appropriate legislation provide for an efficient system of common schools throughout the state.” (Section 183, Kentucky Constitution.)

and (2) the provisions of the laws of the state relating to the schools.

In the following outline the various divisions as provided for by the Kentucky Statutes, including the added divisions, are classified in terms of the functional services given above.

Organization of the State Department of Education

In charge: The Superintendent of Public Instruction.

A. General Services

- I. Superintendent of Public Instruction and Assistant Superintendent.
- II. Division of Public Relations.
- III.
 1. Division of Research.
 2. Division of Statistics, School Records and Reports.

B. Special Advisory and Supervisory Services

- I. Educational.
 1. The Schools.
 - a. Division of Rural School Supervision.
 - b. Division of High School Supervision.
 - c. Division of Negro Education.
 - d. Division of Vocational Education.

- e. Division of Vocational Rehabilitation.*
- f. Division of School Buildings and Grounds.
- g. Division of School Library Service (added July 1, 1933).

2. Teachers.

- a. Division of Teacher Training.
- b. Division of Certification and Examination.

II. Financial.

- 1. Division of Finance.
- 2. Division of Inspection and Accounting.

SERVICES PERFORMED BY THE STATE DEPARTMENT OF EDUCATION

During the first year of the biennium covered in this report an appropriation of only \$55,000 was made available for the operation of the State Department of Education. During each of the years of the preceding biennium, which ended June 30, 1931, the sum of \$65,000 was made available for operating the Department. The General Assembly of 1932 appropriated \$60,000 for each of the years 1932-33 and 1933-34. The funds made available for the State Department of Education are appropriated from the Common School Fund and not from the General Expenditure Fund. These appropriations must cover all charges for salaries, traveling expenses, and operating expenses of the Department. Charges for publishing biennial reports, courses of study, the school laws, and other publications required by statutes, are charged direct against the Common School Fund and not against the appropriation for the State Department of Education.

When it is considered that public education is the largest single business of Kentucky and upon which more than \$20,000,000 is expended each year beside expenditures for the state colleges, the appropriation of \$60,000 seems, and is, ridiculously small. The Constitution of Kentucky, acts of the General Assembly, and numerous decisions of the Court of Appeals state in unmistakable terms that the function of education is a state responsibility; however, as pointed out in the first section of this report, the state has continued to spend less and less through the Common School Fund on the public schools, and, at no time in recent years, has the appropriation for the maintenance of the State Department of Education been adequate to carry on its work. Were it not for the generosity of the General Education Board of New York City in donating the services of five staff

*In September, 1933, the name of this division was changed to "Special Education."

members to the Department, the services rendered by the Department would be limited indeed.

For many years the General Education Board has donated several thousand dollars toward the maintenance and operation of the State Department of Education. During the year the General Assembly appropriated only \$55,000 for maintaining the State Department, the General Education Board gave the State Department of Education \$22,503.83 which covered the salaries, traveling expenses, and clerical assistance of three divisions of the Department. In February, 1933, the General Education Board made provision for the Division of Teacher Training, including the salary of the director, his traveling expenses, and a full-time secretary. In July, 1933, the Board made provision for the salary and traveling expenses of the Supervisor of Library Service; therefore, it can be seen that were it not for the generosity of the General Education Board five divisions, namely, the Division of Negro Education, School Buildings and Grounds, Research, Teacher Training, and Public School Library Service, could not be maintained.

Since the policy of the General Education Board is to make provision for a type of service during a period of four years only, with the exception of the work in the field of Negro Education, the valuable services of the divisions thus maintained will be lost to the state unless the General Assembly increases the appropriation for the State Department of Education sufficient to carry on such services at the expiration of the period when they are supported by the General Education Board.

The support by the General Education Board of the Divisions of School Buildings and Grounds and Research will end June 30, 1934. It is recommended, therefore, that the appropriation of the State Department of Education be increased from \$60,000 to \$70,000 in order that the services of these two divisions may be continued. The services of both divisions have been invaluable to the State Department of Education.

It became apparent following the functional reorganization of the State Department of Education that the volume of business performed by the Department had been so greatly increased that some check should be made to determine the extent of these services. Therefore, each staff member and each person connected with the State Department of Education was asked to keep a daily check upon their work for the purpose of determining the extent and type of service being rendered. This plan was followed during the months of May, June, July, August, and September of 1933. The latter three months, of course, come within the biennium ending June 30, 1935; however, it is felt that the information revealed by this check is of sufficient importance to warrant its inclusion in this report. The remainder of this section will be devoted to an analysis of this study.

The services performed by the State Department of Education are, in the main division activities. That is to say, each division in the organization has its own chief projects, the accomplishment of which constitutes the basis of all the diverse tasks gone through with from day to day. The work of the State Department continues without interruption throughout the twelve months of the year. For example, during the so-called vacation season of the year from May to September, when the schools are to a large degree not in session, the staff members are quite as busy as ever.

A record of some of the detailed activities participated in by the various staff members during this five-month period from May to September 1933 was kept to show something of the volume of the routine tasks accomplished. The number of letters dictated in this interval was 28,025; the number of other pieces of mail was 35,081; the number of miles traveled was 116,809. The first of these figures suggests a considerable degree of office activity; the third figure reflects activity in the field. During this same period, though largely in September, 799 separate schools were visited. School visitation by the various supervisors occupies a large portion of their time during the months from September to May, when the schools are all in session.

During the same five-month period the staff members had a total of 5,387 conferences with school administrators and boards of education from all sections of the Commonwealth. One thousand three hundred and sixty-seven, or about one-fourth of these conferences were with school officials in the field. The other three-fourths, 4,020 to be exact, were conferences held in the offices of the Department. Staff conferences and conferences with other state officials at Frankfort are not included in these totals.

The members of the Department prepared a number of original papers on educational subjects for publication and for public addresses. The number of such papers prepared between May and September was 65. During this same time a total of 386 public addresses were given by the State Superintendent, the Director of Public Relations, and other members of the staff.

THE KENTUCKY EDUCATIONAL COMMISSION

One of the major responsibilities of the State Department of Education during the past biennium was the furtherance of the work of the Kentucky Educational Commission. This work required practically the full-time services of one staff member of the Department during the last year and a half of the biennium as well as the part-time services of other members of the staff. In view of the fact that the report of the Commission has been printed in a volume containing some 350 pages and has been submitted to the General Assembly, it

is not deemed necessary to discuss at length the program proposed by the Kentucky Educational Commission. There are certain features of this program, however, which will be pointed out herein.

The Commission was appointed pursuant to an act of the General Assembly of 1932. Section 2 of this act provided that it should be the duty of the Kentucky Educational Commission "to direct a study of public education in Kentucky and report its findings to the Governor and the General Assembly of this Commonwealth at the opening of its next regular session, with recommendations of such measures and such revision of our school code as may be found necessary for increasing the efficiency and equalizing the benefits of public education throughout the Commonwealth."

On April 9, 1932, the Honorable Ruby Laffoon, Governor of the Commonwealth of Kentucky, appointed the following persons as members of this Commission:

Mrs. James G. Sheehan, President of the Kentucky Congress for Parents and Teachers, Danville.
 Dr. Frank L. McVey, President of the University of Kentucky, Lexington.
 Dr. H. H. Cherry, President of Western Kentucky State Teachers College, Bowling Green
 Mr. J. W. Bradner, Superintendent of City Schools, Middlesboro.
 Mr. H. W. Peters, Superintendent of Christian County Schools, Hopkinsville.
 Honorable W. J. Webb, attorney, Mayfield
 Mr. Yancey Altsheler, wholesale grocer, Louisville.
 Honorable Ben Williamson, former United States Senator, Ashland.
 James H. Richmond, Superintendent of Public Instruction and Chairman of the Commission, in accordance with section 3 of the Commission Act.

The Commission held its first meeting in May, 1932, and, at that time, decided upon a plan of action for carrying on its work. It solicited the services of approximately 100 Kentucky educators and laymen. The Commission's report speaks for the measure and type of service rendered by these persons.

The necessary funds for carrying on this program were donated by the following agencies:

Kentucky Education Association.....	\$7,500
General Education Board	5,000
Kentucky Negro Education Association.....	500

It has been estimated conservatively that this work would have cost the Commonwealth between \$50,000 and \$60,000 if done by a commercial surveying agency.

The sole purpose of the Kentucky Educational Commission has been to propose a program which will make available to the childhood

of Kentucky an improved program of education. This program treats (1) the Aims and Functions of Public Education, (2) the Organization and Control of Public Education, and (3) Financing Public Education. Recommendations in the latter two divisions of the report have been made from a long-time as well as a short-time point of view. It is the belief of the Commission and many citizens who are familiar with it that this report is of a character which should warrant its being accepted as the basis for the reorganization of Kentucky's public school program.

Since the platform statement, adopted by the Commission, sets out in a satisfactory manner the points which the Commission feels should receive immediate attention, it is included herein.

"The Kentucky Educational Commission was authorized by the last General Assembly to make a study of public education in Kentucky. Through the volunteer services of nearly one hundred Kentucky educators who know and understand our school problems, this work has been completed. Our findings are being published in a volume of approximately 350 pages which will be available in October, 1933. We are making many recommendations for the improvement of public education in Kentucky. These will be submitted to the General Assembly in the form of a new body of school laws, as well as in our report. We believe that certain changes are vitally necessary if our schools are to be effectively operated and the taxpayers assured of maximum returns from educational expenditures. These changes are as follows:

- "1. The school laws should be revised and simplified. These laws affect the everyday lives of the people and, therefore, should be in a form understandable to them.
- "2. There should be created a State Board of Education composed of the Superintendent of Public Instruction as chairman and seven representative laymen of the state appointed by the Governor. This Board should have direction and supervision of elementary and secondary education. Through such a board we can be assured of a continuous and progressive policy in the operation of our elementary and secondary schools.
- "3. The elimination of small school districts and consolidation of schools should be effected. This action will assure more efficient school service at less cost.
- "4. The boards of education of all school districts should be elected at large and should have complete control of the schools of their respective districts. The people in the rural areas of Kentucky can never hope to get the same education service as the people in the cities as long as the school teachers are selected by people who are not competent to pass on their qualifications. The sale of school positions, nepotism, and favoritism in securing teachers will mean the wrecking of the school system of the state. The people of Kentucky will never have a satisfactory public school system until they recognize the fact that the schools are for the children of the commonwealth.
- "5. The minimum qualification for teachers should be raised from one year to two years of special college training. Teach-

- ers in the service should be given ample opportunity and time to meet this standard. For years the more progressive school districts in Kentucky have voluntarily maintained qualifications of two years of college work or higher for their teachers. The other school districts can never hope to improve their schools unless they employ teachers with proper qualifications.
- "6. The creation of a council on public higher education, composed of representatives of the University of Kentucky and the four teachers' colleges and the State Board of Education, is proposed in order to correlate the work of these institutions and give a unified program of higher education and also to coordinate the program of higher education with the common school program.
 - "7. The schools would welcome a reorganization of the state government providing for a modernized state budget which would enable school support to receive proper consideration in the whole structure of government.
 - "8. School boards should guard carefully their funds and should operate their schools within their respective incomes. Better protection for school funds in the hands of local school boards and stricter budgetary control of expenditures will make this possible. The floating school debt is a serious problem in many districts.
 - "9. The Common School Fund should be increased. There are 720,000 children of school age in the state. We recognize the financial situation in Kentucky, but even with that in mind, the children of school age must be educated today. Therefore, provision must be made to meet this situation. The Common School Fund must provide for a larger per capita distribution; otherwise, thousands of children will never have the advantage of an acceptable minimum program of education, nor can vast numbers of teachers be paid a living wage.
 - "10. A satisfactory program of equalization can never be accomplished until a constitutional amendment is passed providing for a special equalization fund."

The members of the General Assembly are urged to give this report careful and conscientious consideration. It has been made pursuant to the direction of the General Assembly. The proposed revision of the school laws, submitted independently of the report of the Commission, represents the best a group of leading educators and lawyers have to offer in the way of simplification and revision of these laws. Adoption of the Commission's report and passage of the bill setting out the proposed school code are urged for the sake of the 720,000 children of school age in the Commonwealth of Kentucky.

THE NECESSITY FOR INCREASING THE COMMON SCHOOL FUND

Numerous publications by the State Department of Education and articles by leading Kentucky educators have set forth in detail various aspects of the striking inequalities of educational oppor-

tunity existing in different parts of the Commonwealth. The 1931 Biennial Report of the Superintendent of Public Instruction, the Report of the Kentucky Educational Commission and the Number 9 Educational Bulletin of the Department of Education on "Why the Common School Fund Should Be Increased" are some of the most complete and comprehensive of these studies. The Number 9, Educational Bulletin in particular emphasizes in detail the arguments for increasing the Common School Fund in order to better equalize educational opportunity in the state.

Through the efforts of leading schoolmen and educators of Kentucky, the General Assembly of 1930 enacted legislation providing for an Equalization Fund for the aid of the most needy school districts of the state. This legislation operated during the school year 1930-31, but was declared unconstitutional by the Court of Appeals in 1932. Ultimately there will be need for a Constitutional Amendment making possible the creation and administration of such a fund. However, the present crisis in educational support cannot wait for such an amendment. Since today's children must be educated today, there must be provided an immediate means of caring for the educationally underprivileged children of the state. The most expedient means is the enactment of legislation providing for a substantial increase in the Common School Fund. This is the great and important challenge confronting the members of the 1934 General Assembly of Kentucky.

Why the Common School Fund Should Be Increased.—Some of the reasons for increasing the Common School Fund of the state as set forth in the Number 9 Bulletin of the Department of Education follow:

1. In order to carry out the mandate of Section 183 of the Constitution of Kentucky. This section states: "The General Assembly shall, by appropriate legislation, provide for an efficient system of common schools throughout the state."

All public schools are state schools and their maintenance is, and always has been accepted in Kentucky as a state responsibility. When the state passes the burden of support to the local school districts, it is not assuming the responsibility for school support any more than it would be assuming the responsibility for building necessary roads if each county should be required to build its own roads.

2. Large sections of our state, having great numbers of children and limited property valuation, cannot, through district taxation, provide adequate funds to support the minimum educational program required by law. Increasing the Common School Fund will enable the state to collect money where wealth abounds and distribute it where children abound.

Wealth that has been concentrated in richer sections of the state has been produced from other sections of the state to a very great extent. Although the farmer must produce the tobacco for which Kentucky is noted, the great portion of the wealth that comes from the tobacco industry in Kentucky is centered in our cities. The same is true of our coal and timber industries, as well as of many other products of rural Kentucky.

3. The welfare of the state will be advanced by making adequate educational opportunity available to all the children of the Commonwealth.

a. Better education tends to raise the standard of living of the rural people and, therefore, greatly extends the market for goods manufactured in the cities.

b. Lack of education contributes to delinquency and crime. It costs the Commonwealth ten times as much to send a boy to a "reformatory" as to send him to school.

c. The shift in population makes it a social necessity that the child in remote areas has adequate advantages. (Children born in one section move to another to serve the state. Therefore they are state problems.)

4. The state's program of education can be more effectively, more economically, and more equitably administered.

a. A substantial increase in the Common School Fund will raise teachers' salaries to a living wage.

b. A substantial Common School Fund will produce funds for teachers' salaries that will be an inducement and justify the spending of more time in training schools, which will result in better prepared teachers who will be content and willing to put forth every effort to train the youth of Kentucky in a way that will make them the kind of citizens that this state will be proud of.

c. A larger School Fund will enable district boards to plan for a more efficient system of schools by using local taxes for the repair, replacement and erection of new and modern school buildings.

d. An increased Common School Fund will enable the State Department to extend special services—agriculture, home economics, trades and industries, and junior high school—to all boys and girls.

e. An increased Common School Fund will provide economy of organization, make possible the operation of the schools upon a cash basis instead of a credit basis, and secure much larger returns on monies invested in education.

PART II

REPORTS OF DIRECTORS OF THE DIVISIONS OF
THE STATE DEPARTMENT OF EDUCATION

REPORT OF THE ASSISTANT SUPERINTENDENT OF PUBLIC INSTRUCTION

GORDIE YOUNG

During the biennium the Assistant Superintendent has been engaged in the services and activities named below.

1. General charge of the office of the Department of Education.
2. Conducting the general correspondence of the Department.
3. Services in providing a clearing house of information about school law for the Department and contact officer between the Department of Education and the Attorney General's Office.
4. Receiving, checking and presenting to the State Board of Education budgets and salary schedules of the various school units.
5. In the absence of the Superintendent of Public Instruction, acting in his stead.
6. Field work.

General charge of the office.—This has consisted of (a) direction in a general way of the work of the stenographic force; (b) purchasing of supplies necessary for the operation of the Department; (c) seeing that the machinery and equipment of the Department are kept in workable order; (d) issuing requisitions for the printing of supplies for the Department and for distribution to school administrators throughout the state; (e) providing for the binding of all permanent records and reports; (f) supervising the sending out of supplies to the school units; (g) general supervision of the mailing service of the Department.

Conducting the general correspondence of the Department.—The constantly increasing demand of the public for the personal service of the Superintendent of Public Instruction in the different communities, has required so much of his time that he has been compelled to shift as much of his heavy correspondence as is possible to the Assistant Superintendent. This service has consisted of:

- (a) Answering questions concerning the operation of the new laws requiring educational qualifications of members of boards of education, the operation of the three subdistrict trustee law, qualifications and appointment of county school superintendents, consolidation of school districts, tuition and transportation of pupils, reversion of independent school districts to the county school system, etc.

- (b) Preparing letters and notices for persons who have been asked to appear before the Superintendent of Public Instruction for investigation of charges preferred against them, and carrying on other correspondence incident to these investigations by the Superintendent of Public Instruction and the State Board of Education. These investigations usually concern purported violations of law by superintendents, members of boards of education and teachers.
- (c) Answering questions concerning supplies to be sent from the Department for use of boards of education and administrators of the different school units.
- (d) Correspondence concerning replacement and repair of equipment, and purchase of supplies for the Department.
- (e) Answering correspondence concerning court decisions, including the furnishing of copies of decisions of the Court of Appeals to the interested school administrators and patrons.

Service as clearing house of information about school laws for the Department, and contact officer between the Department of Education and the Attorney General's Office.—A great amount of the time of the Assistant Superintendent has been taken, not only in answering questions concerning school law, but in reading the many court decisions on school cases, providing mimeographed copies and excerpts of such decisions for school officials throughout the state, indexing, binding and filing in a usable and readily available form these decisions for use in answering questions of school officials and patrons throughout the state.

Another part of the service of the Assistant Superintendent which required as much of his time as any other service connected with his work is required in discussing with the Attorney General's Department and in securing opinions on questions which have not come to the Court of Appeals but which are of interest to the different school units. This service is very necessary because such opinions are needed daily in order that school officials may know how the business of their school districts may be conducted so as to conform as nearly as possible with the requirements of the Kentucky Statutes.

During the biennium approximately fifty conferences with boards of education were held with the Assistant Superintendent in the office of the Department of Education concerning questions affecting the school service of their communities. Numerous other conferences were held with committees from boards of education, community organizations and interested citizens throughout the state.

Receiving, checking and presenting to the State Board of Education budgets and salary schedules of the various school units.—During the biennium the Assistant Superintendent carried on correspondence and held conferences with superintendents and boards of education incident to the filing, checking, and approval of budgets and salary schedules of the different school units. Each budget and salary schedule was examined and checked, to determine whether

it met legal requirements, and presented to the State Board of Education for its consideration. One copy of each was returned to the school unit for its files.

All copies of budgets and salary schedules which were approved by the State Board of Education have been bound in volumes for permanent record and placed on file in the office of the Superintendent of Public Instruction.

The constantly increasing amount of work required in properly presenting budgets and salary schedules for the consideration of the State Board of Education, the demand of the different school officials for information concerning the proper distribution of the funds available, and the ever increasing demand for information concerning the operation of the school laws, has been so great as to require more time than can be devoted to it by one person. In order to meet these demands of the public and to give the time and consideration to the financial aspects and legal phases required in the ever increasing complexity of school organizations and decreasing school income, the Superintendent of Public Instruction, under the authority granted him by Section 4396-6 Kentucky Statutes, has very wisely created a new division in the Department of Education, known as the Division of Finance. The work involved in receiving, checking and approving budgets and salary schedules, formerly handled by the Assistant Superintendent, has now been placed in charge of the Director of Finance.

Acting in his stead in the absence of the Superintendent of Public Instruction.—In order that certain functions of the Department of Education might not temporarily be stopped in the absence of the Superintendent, and that the office of the Superintendent of Public Instruction might continue to function without delay, the Legislature did by Section 4396-6 Kentucky Statutes provide that the Assistant Superintendent is authorized to act in the absence of the Superintendent of Public Instruction. During the last biennium there have been several occasions where it became necessary for the Superintendent of Public Instruction, because of the press of his work, to refer certain of the functions, which usually have been performed by him, to the Assistant Superintendent for his consideration, with the request that he report the results of his investigations to the Superintendent of Public Instruction.

It may be of interest to you to know that the public generally is taking note of the constantly increasing amount of work required of the Department of Education. Within the last thirty days three different people have mentioned to me this fact. One of them was a man who had not been in the Department many times for eight or ten years. After he had been waiting two or three hours with friends, he said to me that it was of interest to him to note the increase in

the office space and the number of people required to do the work in the Department. He added "and they all seem to be very busy, too." The second party to whom I refer is a man who has been in the Department frequently. He stated he had been observing for a number of visits the work carried on in the Department, and that he had never been in the office but that he found everybody very busy with apparently as much as they could possibly do. The third party remarked that he could hardly see how so much work could be done with the limited number of employees. He, too, stated he had never been in the Department but what everybody was constantly busy. This was a person who visits the Department frequently.

Field work.—In order that the services of the Department of Education might be extended to as many school units as is possible during the season of teachers conferences, during the biennium the Assistant Superintendent has assisted the field men by performing certain field work usually required of them. During this period he has attended approximately fifty of these conferences, which required the travel of approximately fifty-five hundred miles.

Other field work which has required some of his attention has been meetings with boards of education and visiting county superintendents' offices relative to matters of school administration. During the biennium he has attended approximately twenty such meetings, requiring the travel of about five hundred miles.

Other field work consisted of attending national, state and district conventions of teachers and school officials, as well as addressing commencement gatherings, business and school clubs. Approximately fifteen of such meetings and addresses were made.

During the biennium ten papers and articles were prepared for publication and public addresses.

CONSOLIDATED REPORT OF THE DIVISION OF RESEARCH AND THE DIVISION OF STATIS- TICS, SCHOOL RECORDS, AND REPORTS

JAMES W. CAMMACK, JR., Director of Research

MOSS WALTON, Director of Statistics, School Records and Reports

Under the functional plan of reorganization of the State Department of Education, the Division of Research and the Division of Statistics, School Records, and Reports have been consolidated in the interest of coordinating allied activities. Prior to February, 1933, when this action took place, these two divisions were operated independently, though, on numerous occasions the Division of Research assisted the Division of Statistics in revising certain report forms and records. The present Director of Statistics was associated with the Division of Research from July 1, 1932, to the time he became Director of Statistics.

During the first six months of the biennium the activities of the Division of Research were confined largely to studies of the program of equalization of educational opportunities in the state under the 1930 Equalization Law, and the effectiveness of the plan of safeguarding school funds through the bonding of the treasurers and depositories of school districts, which was inaugurated September, 1930. The administration of each of these programs had been carried on, to a large extent, by the Division of Research during the last year of the preceding biennium.

The War Orphan Scholarship Fund, provided for in 1930, was administered by the Division of Research until January 1, 1933. The administration of this fund is now in the hands of the Division of Finance.

During the period beginning the first of January, 1932, by far the largest part of the activities of the Division of Research were devoted to problems leading up to the program of the Kentucky Educational Commission and to its work. At the first meeting of the Commission, held in May, 1932, the Director of Research was made Secretary and Treasurer of the Commission. Since the work of the Kentucky Educational Commission is covered fully in the published report of the Commission and is treated in the statement of the Superintendent of Public Instruction in this publication, it has not

been deemed necessary to discuss the Commission's work herein. The Director of the Division of Research prepared numerous articles concerning the work of the Kentucky Educational Commission and certain phases of the work of the State Department of Education. At least ten of these articles were published during the biennium.

The Division of Research assisted in the administrative survey of Hopkins County school district, made in May, 1932.

Information concerning Kentucky's school system was furnished to approximately 500 persons within Kentucky and approximately 250 persons without the state during the biennium. Numerous conferences were held with research students in residence in Kentucky institutions. The Director of Research attended approximately 25 educational conferences in Kentucky during the two-year period and approximately 8 conferences without the state during the same time. He delivered approximately 50 public addresses during the biennium. Most of these were devoted to the work of the Kentucky Educational Commission.

One of the major functions of the research agency in the State Department of Education is to seek solutions for the numerous problems of state school organization and administration. Many problems of this nature have been studied during the biennium, but most of these studies have been incidental and corollary to the work of the Kentucky Educational Commission.

Since the present Director of Statistics assumed the responsibilities of this division, the major part of his time has been devoted to assembling and preparing materials for the biennial report of the Superintendent of Public Instruction. In view of the fact that the school recording and reporting system of Kentucky has been revised during the past biennium, the duties of this division have been heavy. It is true, however, that the creation of the Division of Finance, with the assignment of all financial duties to the director of that division, has simplified, to a considerable degree, the work of the Director of Statistics. The work of this nature will be further simplified when the responsibility for all statistical work is definitely placed upon the consolidated Divisions of Research and Statistics.

Following the submission of the report of the Kentucky Educational Commission and the proposed revision of the school laws to the General Assembly in January, 1934, these divisions will be in position to render a more diversified service to the State Department of Education.

REPORT OF THE DIVISIONS OF RURAL AND HIGH SCHOOL SUPERVISION

MARK GODMAN, L. N. TAYLOR, O. J. JONES,
J. W. BROOKER, Supervisors

The task of supervising the elementary and secondary schools of the State is borne, in the main, by the Division of Supervision of the State Department of Education. In the discharge of these duties, the members of this Division have not only endeavored to see that the schools are measuring up to the standards and regulations prescribed by legislative enactment and the State Board of Education, but they have also worked with the schools in the field, studying their conditions and needs and aiding them in laying out programs for improvement.

Four men constitute the personnel of this Division of Supervision. Upon them devolves the responsibility of supervising the work in approximately 7,800 public elementary and secondary schools. This fact alone should impress the thoughtful reader with the magnitude of their task in seeing that acceptable school conditions are promoted and preserved throughout the State. Naturally, in the discharge of their duties, the supervisors have traveled many thousands of miles, carried on much correspondence, delivered many addresses and held or attended many conferences. Obviously, it is impossible to outline in detail all of the educational activities in which the supervisors have engaged during the past two years. The supervision of the entire public school system means that much time has been devoted to correspondence, checking reports, gathering statistics, holding office interviews and conferences and preparing bulletins and circular letters which convey necessary information to school authorities. All of this work has required the supervisory staff to spend a great number of hours every month in the office. The members of the Division have, however, kept a record of five activities which, in themselves, go far in illustrating the wide scope of duties which they have been called upon to perform during the school years 1931 to 1933. They are:

Miles traveled in the discharge of duties.....	153,157
High schools inspected (no record of number of elementary)....	2,164
Addresses delivered	849
Conferences outside of office	2,087
Articles prepared for educational journals.....	12

The members of the Division appreciate the fact that such items as miles traveled, conferences held, schools inspected, articles written and addresses delivered do not in themselves constitute an adequate measure or criterion of the extent or effectiveness of their service; still, they are generally essential to desirable results in the promotion of programs for the improvement of local school administration. This has been especially true in the matter of schools inspected and conferences held or attended. In this connection it may be a matter of interest to list the various types of educational conferences and meetings which have engaged a considerable portion of the supervisors' time during the school years 1931 to 1933.

Conferences with boards of education.

Conferences with parent-teacher organizations and other interested groups.

County teachers' conferences.

District teachers' conferences.

State education association meetings.

State-wide conferences of administrators.

Special regional conferences with superintendents, supervisors and principals.

Meetings of state and regional accrediting associations.

Many of these meetings have entailed an obligation on the members of the Division to prepare and deliver addresses while others, especially those with boards of education, have called upon them to furnish advice concerning legal matters.

Among the published contributions which this Division has made to the schools, there is one which should be given special consideration in this brief report. This publication is entitled a **Manual of Organization and Administration for High Schools**. It replaces the **Monograph for High Schools**, published in 1927. The chief aim of this 164 page book is to organize a body of information and interpretation which will be useful to the secondary schools of the State. The law charges the State Board of Education with the responsibility of approving high schools. In exercising this duty it is necessary to require some uniformity of practice and to prescribe school procedures necessary to maintain these standards. This the Manual does. Not only does it set forth the regulations required for the approval and accrediting of four-year, three-year senior and six-year high schools, but it also presents in printed form for the first time the standards required of elementary schools and junior high schools as well.

In this publication one also finds in printed form for the first time not only the suggested curricula for the large junior and senior high schools, but also the curricula approved by the State Board of Education for the small four-year and six-year high school organiza-

tions that employ fewer than six teachers. A study of these curricula will disclose that they have been so worked out as to give unity and consistently to the whole high school program throughout the State. Other chapters go into considerable detail regarding such important phases of high school activity as the library, the laboratory, records and reports, extra-curricular activities, public school music, health and physical education, teachers' marks and reorganization of the twelve-grade school system. The many favorable comments which the Department has received relative to this publication from school leaders within and without the State give evidence of the fact that it is meeting a long felt need in our schools.

The members of the Division believe that their best contribution to the cause of public education in this State is found in what they have done during the past two years to encourage wider cooperation in the building of stronger school units of administration. Especially have they worked in behalf of the development of stronger county units of administration. In an effort to further this end the members of the Division have spent much time in surveying and studying the educational conditions in various counties. In these surveys a careful study has been made of such factors as topography, road conditions, location of school buildings, density and distribution of population, etc. As a result of these studies, a number of counties have been able to effect economies in the organization and administration of their schools and at the same time through consolidation and reorganization provide more equitable educational opportunities for their children.

Naturally, in this work of developing stronger units of county administration, the supervisors have spent much time in conference with members of boards of education in those independent school areas that are still scattered throughout many counties. The purpose of most of these conferences has been to urge these independent units to merge their resources with those of their respective counties and as a result help in developing a stronger and more unified school program throughout the county. They have pursued this policy with these independent areas for several reasons. Frequently these areas represent large centers of wealth, the income from which is spent exclusively in the operation of their own schools. Again, these independent school areas scattered through the county are often the trading, political and social centers for the people of the surrounding territory and as such are natural school centers for the county. Also, they are often the centers of the county's road system and for this reason represent logical centers for school consolidation. Wherever conditions like this exist in any given county, it is manifestly impossible for a county to develop a strong well-financed and efficient system of schools. This is true for the simple reason that where such conditions exist in any county, there is certain to be

a one-sided school development because efficient schools and school conditions will be developed by localities and favored spots rather than throughout the whole of a large area. It is gratifying to note that splendid progress has been made during the past two years in effecting cooperation in building stronger county units of school administration through merging of many of these independent areas with their respective county systems. In devoting much of their time to working with school authorities in county, city and independent graded school districts along the line of developing stronger county units of administration, the supervisors believe they are doing that which promises best for the greatest number of children and for the future.

REPORT OF THE DIVISION OF NEGRO EDUCATION

L. N. TAYLOR, State School Agent

Equality in government.—The spirit of fair play prevails in Kentucky. This spirit is given expression in our institutions and laws. It is essential to this spirit that we scrupulously avoid discrimination in suffrage, taxation, and public services. The ballots of government, the burdens of government, and the benefits of government must be shared by all without distinction of class, color, or creed.

In most of its applications, this high ideal of democracy is already operative in our statutes and in our thinking and practice. We generally expect all our citizens to vote together wherever there is an election. We generally expect any taxes that we levy to be collected uniformly from all within the boundary of the taxing unit. And we expect the same level of justice in public service to be enjoyed by all. We want no discrimination in connection with our government, federal, state or local.

Inequities.—While referring with pride to our policy of equality in government, and to the fact that in general we conform to it in our thinking and practice, there are in connection with our common schools, which as the bulwark of democracy should typify the best in government, certain practices to be mentioned which have not yet been brought into conformity with this policy. (1) In one of our six types of school districts (graded common school districts) only citizens of one race can vote in common school elections. This discrimination has been copied sometimes in subdistrict school elections, but no longer permitted there. (2) In the same type of district the principle of uniform taxation is not yet in full operation. The district tax exempts colored citizens and such property as they may own in such districts. These districts fail to provide schools for their colored children, making it necessary for the taxpayers of the surrounding rural districts to provide schools for the colored children in these graded common school districts. Some subdistricts (consolidated) in county school systems have local subdistrict taxes, and a few of them have exempted colored taxpayers, but this is no longer authorized. (3) The school funds are generally distributed and used with "no distinction on account of race or color." There are exceptions to this rule in the one class of districts mentioned and in

five small cities that have two boards (one white, one colored) and operate on the theory that the education of the children of either race is not a general public function, but an obligation on only the taxpayers of that race.

Remedy in prospect.—These deficiencies are inevitably passing. They will disappear with the enactment of school laws uniform for all districts. We have the same criminal laws in all our circuit court districts so all our criminals may have equal justice, and we hope to have the same school laws in all our school districts so all our children may have equal opportunity.

Segregation.—Together with the ideal of equal opportunity, our people have maintained a policy of segregation of Negro children. Separate schools are maintained for them. This more than doubles the cost of their education in most of the rural communities, where money is the scarcest, and either increases the rate of taxation in these counties or impoverishes their white schools. On this account many people in the southern states insist that the federal government should make appropriations to help maintain schools for colored children in states that maintain separate schools for them. There is no immediate prospect of relief from this quarter while most of the states do not maintain the dual school system.

Elementary schools.—Elementary Schools for Negroes are maintained in all the counties that have more than four or five children, that is in 110 counties. There are two noticeable trends in migration. (1) Colored people are leaving the farms, quitting farm tenantry and moving to the towns and cities near them. (2) They are moving from the smaller of these towns and cities to larger cities in this state and to industrial centers outside the state. There are certain inevitable results. (1) The rural population is thinning out and the rural schools are being merged. (2) There are but few rural high schools, and they are tending to yield to the towns as high school centers. (3) Transportation must be employed to get enough children together to make a satisfactory school, and counties of sparse population must combine to maintain a high school. (4) The colored population of the state is reducing. These facts make the per capita cost of colored schools increasingly great and their maintenance and administration increasingly difficult. With two or three exceptions the county school authorities meet the situation with practical plans for carrying on and give the same term to schools for colored children as to those for whites, and the same salary schedule to the teachers.

High schools.—The distribution of colored children of school age, and of high school facilities for them is as follows as the biennium closes on June 30, 1933: 37 counties having 77.4 per cent of the children maintain one or more high schools; 10 counties having 1.9

per cent of the children transport to standard high schools in other counties; 22 counties having 13.1 per cent of the children maintain two years or three years of the standard four-year high school; the remaining 41 counties having 7.6 per cent of the colored children of the state make no provision for high school pupils other than to pay their tuition somewhere outside the county. Ten of our counties have no colored children, or no more than three or four.

This situation is constantly changing in favor of a more complete high school service as pupils qualify for the high school grades and as facilities are provided for consolidation of schools and transportation of pupils.

In connection with the very wholesome growth of our colored high school service during this biennium certain essential contributing factors should be mentioned. (1) **The John F. Slater Fund** has contributed with telling effect. A majority of the schools that have reached the four-year status or that are now approximating it owe their development in major or minor part to this fund, and aid from it has encouraged a number of counties unable to maintain high schools to transport their children to high schools in other counties. (2) **The Julius Rosenwald Fund** has aided in the construction of buildings, in the transportation of pupils, in the purchase of libraries and equipment and in scholarship for the training of teachers. Aid from this fund was liberal and liberally administered when it could stimulate to best effect. It has in this biennium reduced its gifts of money to the minimum, but continues its watchful interest and good will. (3) The very wholesome attitude of our public school boards and superintendents and the liberal spirit with which they have considered the needs of the colored children of their cities and counties has brought hope to the discouraged and opportunity to the neglected. Much credit is due these people. School board members render more and better service to the public without hope of personal reward than do any and all other public officers in the state.

Colleges.—The one notable thing that has occurred in the last decade to give the greatest encouragement to the Negroes of the state has been the improvement of their college service. Within this biennium (July 1, 1931, to June 30, 1933) the Kentucky State Industrial College has won recognition and approval as a standard senior college. Its administration on a professional basis has been stabilized, its services reorganized, and its college enrollment handsomely increased. The development of this college has definitely stimulated the growth of high school by serving as a training school for their teachers and by maintaining high school graduation requirements for entrance to college.

The Municipal College maintained by the board of trustees of the University of Louisville has within the last year won standard senior

college rating. These two colleges are the first and only ones yet accredited by our regional agency for the accrediting of colleges, and their development has given confidence to a discouraged people.

The West Kentucky Industrial College at Paducah has been reorganizing its curriculum and personnel, seeking to qualify as a standard junior college. It is confidently hoped that this ambition may be realized and that this college may serve as an elementary teacher training institution for its section of the state.

A review.—For ten years I have given much of my time to the development of a state program of education of Negroes. This has been made possible by appropriations from the General Education Board. Thru these years this Board has cooperated consistently with our Superintendents of Public Instruction in their program of improvement of education service for Negroes. It has served as the coordinating agent for the several philanthropies interested in this service. It has been a progressive and at the same time a stabilizing influence in educational administration of schools for both races.

When viewed over a series of years the improvements observed in the high school and college fields have been gratifying, exceeding my fondest hopes of ten years ago. These results could not have come

about except for a succession of devoted Superintendents of Public Instruction, and they could not have come about had not the colored youth of our state been material worthy and capable of this improvement.

REPORT OF THE DIVISION OF VOCATIONAL REHABILITATION*

HOMER W. NICHOLS, Director

CLEVELAND MOORE, OLNEY M. PARICK, Supervisors

The problem defined.—Vocational Rehabilitation is generally accepted as the process of rendering a disabled person fit to engage in a remunerative occupation. It is designed (1) to assist in removing inequalities of opportunities for the disabled; (2) to assist in preparing physically handicapped boys and girls for some vocational pursuit; (3) to assist vocationally handicapped individuals who have been engaged in one occupation to become readjusted to another in which they may be self-supporting. It is a case study designed to provide for adjustments and readjustments of eligible disabled persons to the employment world.

Rehabilitation—a public responsibility.—Rehabilitation through vocational preparation is a new phase of educational systems. Such special preparation satisfies a demand not otherwise provided. This new idea in education contends not only that vocationally handicapped people should be prepared, but that the preparation provided be specifically adapted to the needs of the individual. This special service is provided by the Commonwealth of Kentucky and the Federal Government because it is considered to be sound economic business. It adds to the social order as well as the productive power of the Commonwealth and Nation. It is accepted as a public policy of governments.

The inability of a person to earn a living or support dependents brings not only discouragement, but also a loss of morale which consequently threatens the welfare of the social order. It is a well-founded principle and an accepted proposition that injured citizens should be rendered fit to engage in remunerative employment.

Service extended to all groups and communities.—Local educational officials and social agencies in many cities have become interested in organizing within their departments rehabilitation programs which are carried on in cooperation with state programs.

The Kentucky program reaches every county in the Commonwealth rendering service to all classes and groups of the disabled

*In September, 1933, the name of this division was changed to "Special Education."

who are found eligible, susceptible, needing and accepting the aid. Such a program compares favorably with the public educational program of Kentucky, which does not reach in actual school attendance more than 65 per cent of all the children within the legal school census age of the Commonwealth.

The findings of a study recently made by this Division indicate that with a slightly enlarged program adequate service may be provided in Kentucky for all the physically and vocationally handicapped persons who should receive it.

Policies add to public education.—Since the exploratory training is provided and vocational trends indicated during the period of high school preparation, physically and vocationally handicapped persons need all such training obtainable before entering upon a special program preparing specifically for an occupation.

The Kentucky Division of Vocational Rehabilitation has, therefore, established a policy of:

1. Advising all eligibles within the legal school census age who have not completed high school to secure as much preparatory training as possible before entering upon a training program for rehabilitation.
2. Giving vocational guidance and counsel to eligibles under nineteen years of age who have not completed high school until they are ready for specific programs for rehabilitation.
3. Recording information of physically handicapped children.

This policy adds to:

1. The general system of education.
2. School attendance.
3. Preparation for a sound foundation upon which to build a more permanent and successful vocational future.
4. The probability of being able to render adequate service to all physically and vocationally handicapped people who should receive it.
5. The reliability of determining the problem, below nineteen years of age, through the high school system.

Special Activities.—We desire to call your attention to the following special activities for the period covered in this report:

1. **Organization of the K. R. A.:** In compliance with the desire to expand, promote, and make more efficient the service rendered physically and vocationally handicapped people of the Commonwealth of Kentucky by this Division of the State Department of Education, we have perfected an organization known as the Kentucky Rehabilitation Association. It is now a part of the Vocational Education section of the Kentucky Education Association and holds its meeting annually in connection with this Association.
2. **Bulletin Published:** This study covered a six-year period. Since there has never been printed for distribution a bulletin on Vocational Rehabilitation in Kentucky, the Board authorized such a

publication incorporating the major findings of this research and other vital information concerning this subject.

3. **Rehabilitation a Type of Special Education:** A study of the problem of special education under the direction of the Kentucky Educational Commission shows that rehabilitation, adult education, and the care of the handicapped child require a cooperative service which composes very well a program of Special Education.

STATISTICAL REPORT

July 1, 1931—June 30, 1933

I. Contacts Made

1. Total number of cases contacted.....	1,500
a) Eligibles and trainees	1,197
b) Not eligible or susceptible.....	88
c) Referred to other agencies	9
d) Given guidance not ready for training.....	206

II. Rehabilitations

1. Total number of cases rehabilitated	371
a) Through school training	280
b) Through employment training	48
c) Through job restoration	43
2. Age or rehabilitants:	
a) Under 21	118
b) 21 to 30	177
c) 31 to 40	45
d) 41 to 50	14
e) 51 and over	6
f) Unknown	11
3. Education of rehabilitants:	
a) Grades 1 to 6	28
b) Grades 7 to 9	104
c) Grades 10 to 12	143
d) Other	96

FINANCIAL STATEMENT

REPORT OF THE DIVISION OF SCHOOL BUILDINGS AND GROUNDS

JOHN W. BROOKER, Director

HUGH MERIWETHER, Consulting Architect

The Division of School Buildings and Grounds of the State Department of Education is made possible through the generosity of the General Education Board. Its personnel consists of a director and a consulting architect. The functions of the Division, around which its activities have centered for the past biennium, are as follows:

1. To assist boards of education in formulating school building programs consistent with their needs and resources.
2. To assist in the selection of school sites.
3. To furnish working plans and specifications for school buildings ranging from one to four teachers in size.
4. To furnish unit layouts of special rooms, such as study halls, science laboratories and recitation rooms, home economics laboratories, etc.
5. To prepare suggestive floor plans for the larger school buildings.
6. To examine and approve or disapprove architects' plans and specifications for school buildings in accordance with Section 4388, Kentucky Statutes.
7. To advise with school officials concerning remodeling or adding to existing school buildings.
8. To furnish information and render assistance on school house-keeping problems.

How well the above objectives have been realized may be seen by a study of the activities of the Division for the biennium ended June 30, 1933, a summary of which follows:

SUMMARY OF THE WORK OF THE DIVISION OF SCHOOL BUILD- INGS AND GROUNDS, FROM JULY 1, 1931 TO JUNE 30, 1932, INCLUSIVE

Number of different counties in which service was rendered on school building projects	51
Total number of school building projects	109
Plans for smaller buildings furnished	50

State conferences attended	10
National conventions attended	4
Studies completed	13
Articles published	7
Addresses	15
Miles traveled	19,285
Transportation costs	\$843.47
Rooms, meals, incidentals	\$353.87

In the past biennium service has been rendered on a total of 246 school building projects. Of this number 137 were small school buildings and additions designed by this office. In addition 21 suggestive plans were furnished for larger school buildings, 13 laboratory lay-

outs were designed, 18 county boards of education aided in the selection of school sites, and this office worked in close cooperation with school architects on the remaining projects.

The approximate cost of new school buildings and school improvements upon which service was rendered by this office amounted to \$1,500,000 for the biennium. The approximate value, at the usual rates, of architectural service alone furnished on the above projects would have amounted to \$18,864.53. In addition to this, detail drawings of science furniture, home economics furniture, and library furniture, have been prepared and furnished upon request to various school boards over the state. Sixteen school building studies were completed, fifteen addresses delivered, seven articles were published, and numerous state and national conventions attended.

At this writing schoolhouse construction is being stimulated to a considerable degree in this state by the public works program of the National Industrial Recovery Act. Scores of boards of education are studying their school building needs and are preparing plans and outline specifications for submission with applications to the federal government for aid on needed school buildings. If anticipated aid under the provisions of this act materializes, the present year should be the greatest from the standpoint of new school house construction that the state has ever experienced.

REPORT OF THE DIVISION OF VOCATIONAL EDUCATION

G. IVAN BARNES, Director

F. G. BURD, ATA LEE, A. N. MAY, Supervisors

The State's vocational program concerns itself primarily with that type of instruction best suited to (1) those who in the future are to become our farmers, (2) those who are to become our trade and industrial artisans and leaders, and (3) those who are to become our home makers. The State is also charged with the responsibility of training teachers for these specific groups. The statements given below are intended to show the extent of our program, the type of work requested, the expenditure by counties, and to summarize very briefly each phase of the program.

Agriculture.—During the year 1931-32, 3,889 farm boys were enrolled in 133 high school departments of agriculture, and in 1932-33 there were enrolled 3,909 farm boys in such departments. Five hundred eighty-three boys participated in the state stock judging contest, 1,300 wrote essays on farm problems, and 1,400 pre-vocational boys were given specific farm training. More than 50 per cent of the departments of agriculture maintain leadership organizations commonly known as the "Future Farmers of America."

In order to insure a practical application of such instruction, all boys are required to complete certain well-planned farm projects. The success of this directed practice is shown below:

DISTRIBUTION OF PROJECTS AND INCOME FROM VARIOUS ENTERPRISES 1931-32 AND 1932-33

Name of Enterprise	No. of Projects Completed	Pupils' Labor Income	Average Labor Income Per Project
Tobacco	2,301	\$101,399.97	\$44.06
Corn	1,457	34,206.58	23.48
Hogs	806	18,453.55	22.89
Poultry	531	15,005.80	28.26
Dairy Cows	500	32,177.33	64.35
Garden and Truck	413	11,868.84	28.74
Hay	353	8,791.11	24.90
Beef Cattle	256	6,371.38	24.90
Sheep	176	5,918.34	33.62
Berries	162	10,059.26	62.09
Potatoes	156	3,572.54	22.90
Miscellaneous Crops and Animals	154	4,763.33	30.93
Total	7,265	\$252,588.03	\$34.77 (Average)

In addition to the above, adult farmers also are taught to earn and learn at the same time. Last year there were 67 evening classes for adults with an average attendance of 16 farmers per class. The demand for this form of service is becoming more pronounced each year, especially in schools maintaining departments of agriculture.

Home economics.—During the biennium 25 new departments of home economics have been added. The enrollment has now reached 2,276 girls in subsidized departments. There are approximately 250 high schools in the State maintaining departments of home economics. Of this number 79 meet all requirements and are being subsidized.

All of the vocational departments, with the exception of 6, are doing some home project work. The home project is an attempt to tie up classroom instruction with practical things in the home. The

table below is a summary of project work done in vocational departments during the biennium.

	No. Projects Completed
1. Clothing	2,206
2. Foods	1,283
3. Home Furnishings	746
4. Home Care	497
5. Home Management	141
6. Child Development	154
7. Health	99
8. Family Relations	72
9. Miscellaneous	102
Total	5,300

Our home economics program is seriously handicapped because of a lack of funds. There are on hand many more applications for aid than there are funds available.

Trades and industries.—Trade and Industrial Education has not lost ground during the present financial crisis. Boards of education have rigidly held on to their trade classes as a part of their educational responsibility. New sections of the State have indicated their desire for certain specific types of trade classes.

During the biennium there has been taught a total of 151 mine safety and first aid classes, with an enrollment of 2,364 adult miners, and 7 foremanship classes with an enrollment of 62. Six part-time classes, with an enrollment of 180, have been conducted for the working boys and girls. The following is a list of all-day trade classes and the enrollment for the past biennium:

Trade	No. of Classes	Enrollment
Linotype	2	27
Dressmaking	4	259
Sheet Metal	2	87
Applied Electricity	5	299
Bookbinding	2	91
Cabinet Making	2	101
Press Work	2	65

Part-time classes for the working boys and girls offer an opportunity to extend our school service to a very deserving group of ambitious young people. Every school unit has a group of such people who are not in school, perhaps because they must of necessity help earn a living for the family, or they are not attracted by the curricular offerings. Boards of education are receiving the per capita for these boys and girls and are in turn responsible to them for some training. The school service in almost every industrial center, large or small, should be extended to include part-time classes for these boys and girls.

Teacher-training.—Teacher-training in all phases of Vocational Education has advanced in (1) setting up a scheme for selecting more definite and specific content, (2) setting up a scheme for selecting trainees with scholarship and leadership ability, and (3) requiring of all trainees carefully planned and well presented lessons. The short-unit professional graduate courses have contributed more to the improvement of the teachers in service than all other types of help given. The itinerant teacher-training or follow-up of young and inexperienced teachers has saved many young teachers from complete failure.

Teacher training institutions only in the last few years have been able to supply our demands for teachers. Agriculture teacher training is done at the University of Kentucky, Berea College, and Western Teachers College. Home Economics teachers are trained at the same institutions and also at Eastern Teachers College and Murray Teachers College. There has been an excellent spirit of cooperation among the administrative forces of the institutions, as well as a conscientious effort on the part of the teacher trainers for the improvement of teachers preparatory for positions.

CONSOLIDATED REPORT OF THE DIVISION OF TEACHER TRAINING AND THE DIVIS- ION OF CERTIFICATION

R. E. JAGGERS, Director of Teacher Training

A. P. TAYLOR, Director of Certification

The Division of Teacher Training and the Division of Certification have been established in order that they may serve the children of the state through the training and certification of teachers for the public schools. The functions of these divisions are carried out through organized activities of persons selected for this work. The services rendered through these activities are given in this report.

Functions of Teacher Training and Certification.—The Division of Teacher Training and the Division of Certification have three main functions: first, they must work with all institutions of the state that are engaged in the training of teachers, in developing curricula for the training of teachers for the various types of teaching positions in the state; second, they must lead in setting up principles for the certification of teachers, and see to it that these principles are carried out in practice through the issuance of certificates; and third, they must study the problems of teachers in service to discover whether or not the training offered in the training institutions is meeting their needs, and lead in developing opportunities for the growth of teachers in service.

TEACHER TRAINING

The Teacher Training Division.—The Division of Teacher Training was established February 1, 1933. The first three months was spent in planning a program, and in visiting colleges for the purpose of studying the facilities provided for training teachers. During this period twenty-seven colleges were visited and their programs inspected. In addition to the colleges inspected in Kentucky seven colleges in Indiana and in Ohio were visited. The facts collected during visits to colleges became the basis of standards for a program of teacher training and supervised student teaching in the colleges of the state.

Teacher training standards.—One of the first tasks to be faced was the need for setting up unified standards for teacher training for the state. The first steps in the development of these standards for teacher training, including supervised student teaching, were taken during the first months after the Division was established. They were developed by the Teacher Training Committee appointed by the Superintendent of Public Instruction under the authority of the Normal Executive Council. This committee consists of the Deans of the four white Teachers Colleges, the Dean of the College of Education at the University of Kentucky, the President of the four-year college for Negroes, the President of the Kentucky Educational Association, the Dean of one of the four-year private colleges, and the Director of Teacher Training as Chairman. The standards will be come effective September 1, 1933.

Kentucky Educational Commission work.—As a member of the coordinating committee of the Kentucky Educational Commission, much of the time of the Director of Teacher Training was given to the study. He attended all the meetings of the Commission, the meetings of the coordinating committee, and meetings of the four subcommittees. During this period much time was spent in committee meetings in many places outside of Frankfort.

Meetings.—The Director of Teacher Training attended one meeting outside of Kentucky during the spring, and many in the state. The meetings in the state consisted of teachers' conferences, regional associations, teacher training conferences and conferences with laymen and parent-teacher groups. From one to three meetings were attended each week.

Supply and demand study.—There was inaugurated in the spring of 1933, under the supervision of the Director of Teacher Training, a comprehensive study of teacher supply and demand. This involved considerable time in preparing forms upon which the information was collected, the work consisting of the sending of these forms to approximately 18,000 persons, sending follow-up letters, and the tabulation of the data when the forms were returned. This study will not be completed before May, 1934.

Office reorganization.—As a part of the study of teacher supply and demand it was found necessary to examine each of the 30,000 transcripts in the files in order to bring together needed information in brief form. To this end reindexing all transcripts was undertaken in April 1933. The work was not finished by June 30, 1933, but is to be completed soon after the 1933-34 fiscal year begins. As a result of this new index it will be easily possible to ascertain in a short time the exact number of certificated teachers in the state at each level.

Teacher training curriculum study.—The Kentucky Educational Commission recommended a study of the public school curriculum. The organization of this study at the college level is the responsibility of the Teacher Training Division. Tentative plans have been made for such a study. This study will extend into 1933-34 and possibly into 1934-35.

Preparation of reports.—It is necessary to make reports and to prepare papers upon different phases of the training and certification. No less than four papers are prepared concerning different phases of the work each month.

CERTIFICATION

Functions of Division of Certification.—The major functions of the Division of Certification is to see to it that legal requirements set up by the legislature and State Board of Education for the certification of teachers are carried out in practice through the issuance of certificates.

The duties of the Director of Certification fall into two major phases, namely, the issuance of certificates upon credentials and conducting teachers' examinations. His activities consist of examining credentials, conducting examinations, authorizing the issuance of certificates, writing answers to inquiries, and personal conferences with applicants for certificates.

Conducting examinations.—A relatively small percentage of the certificates are issued upon the basis of examinations. Regardless of this fact questions must be prepared by the Director of Certification and they, with materials for conducting examinations, must be sent to all the counties twice each year. The manuscripts of all persons taking teachers' examinations in all the counties are sent to the Division of Certification for grading. The supervision of grading is the responsibility of the Director. A report concerning the examination is sent to each applicant and to each county superintendent.

Issuance of certificates upon credentials.—The issuance of certificates involves sending application forms to applicants, examining the application, procuring transcripts of credits from the colleges which the applicant attended, examining transcripts, and authorizing certificates. Certificates are issued, reissued and extended for life. During this time many communications are exchanged between the director and applicant before the certificate may be issued or extended. During the past biennium the number of certificates issued, reissued, and extended upon the basis of credentials alone, has increased from 11,533 to 14,540, or 26.1 per cent.

Personal conferences with applicants.—During recent years standards for the issuance of certificates have been raised. Certificates are issued in some instances on the basis of specific curriculums. During this period of transition from the old regulations to the new it is often necessary for the applicant for certificate to appear in person in order to clear up certain types of difficulties. During the summer months the Director holds each day approximately eight conferences with applicants who come to the Department. During these busy months an average of seven calls are received over the telephone each day. Such activities are time consuming but are justified in most instances, since they help to clear up differences.

Volume of mail.—Since the Division of Certification issues about seventy-five per cent of the certificates the volume of mail handled is considerable. From 40 to 140 letters come to the Division daily. These letters must be opened, read, and previous correspondence of the writer of each letter must be taken from the files in order that questions asked in the letter may be answered. After the letter is answered the "case" must be refiled. This activity goes on day after day. During the busy months of June, July and August about 10,000 letters are written, making it necessary to write an approximate average of 140 letters each day.

Filing.—There are about 30,000 cases in the files of the Division. The process of issuing certificates or renewing them involves the handling of each case no less than three times. Each case must be removed and returned to the files each time a communication relating to the case is received. The occasions for such removal being (1) when the application is received, (2) when requests for credits are sent, (3) when credits are received (sometimes transcripts are received from three or four institutions concerning one case) and (4) when the certificate is issued. The filing alone requires the full time of one person during most of the year.

Issuing certificates and keeping records.—The certification clerk receives and records all fees, issues, records and mails out all certificates, and has charge of accrediting records. During the biennium ending June, 1931, the certification clerk wrote and approved 15,637 certificates, but during the biennium ending June, 1933, this number has grown to 17,003, an increase of approximately 8.0 per cent. The certification clerk wrote during 1932-33 an average of approximately 29 certificates per day for 300 days in the year.

Increase in work.—The increase in the work connected with the issuance of certificates is illustrated by Table I included in this report. The average number of certificates issued and approved each year during the biennium ending June 1931 was 7,569, while the biennium ending June 1933, the average number issued each year

TABLE I
AVERAGE NUMBER OF CERTIFICATES ISSUED DURING BIENNIUM
ENDING JUNE 1931 AND JUNE, 1933

Biennium Ending	Bases of Issue			Percentage	
	Cre- dentials	Examina- tion	Total	Cre- dentials	Examina- tion
1931	11533	4104	15637	73.7	26.3
1933	14540	2463	17003	85.3	14.7
Percentage Increase	26.1	-40.0	8.0		

was 8,502. The increase in the total number of certificates was 8.0 per cent. During this period the number of certificates issued upon the basis of credentials increased 26.1 per cent. Due to the fact that a larger percentage of the certificates are issued upon the basis of credentials than formerly the work of certification increased during the present biennium over the preceding one by more than 26 per cent.

TABLE II
CERTIFICATES ISSUED BY THE DIVISION OF CERTIFICATION AND
THE STATE INSTITUTIONS DURING BIENNIUM ENDING JUNE
30, 1931, AND THE BIENNIUM ENDING JUNE 30, 1933

Biennium Ending	Number of Certificates		Total
	Division of Certification	State Institutions	
1931	9867	5770	15637
1933	11045	5958	17003
Increase	1178	188	1366

The increase in the work of certification is due first to the fact that the actual number of certificates issued has increased, and second, to the fact that the proportion of all certificates issued outright by the Division of Certification has increased over the biennium. This increase in the proportion of certificates issued by the Division is shown in Table II.

REPORT OF THE DIVISION OF FINANCE

Including Audit and Inspection

F. D. PETERSON, Director

J. C. MILLS, J. VIRGIL CHAPMAN, HAROLD EADES

This is the first report under the above title to be incorporated in a Biennial Report of the Superintendent of Public Instruction of Kentucky. After careful study and diligent research, Superintendent Richmond made a functional reorganization of the State Department of Education early in 1933. The responsibilities placed upon the Division of Finance include Auditing and Inspection, Bookkeeping and Accounting, and the additional duties of checking and examining all Bugets, Working Sheets, Salary Schedules, Treasurer and Depository Bonds, and other forms of financial reports submitted by boards of education.

Although the Division of Finance, as now constituted, was not charged with all these duties through the entire biennium embraced in this report, it is our pleasure to give a succinct record of our activities in the various fields herein mentioned.

The history of education reveals that only in recent years have administrators been so vitally concerned with scrutinizing every detail of financial transactions and records. Such change of policy is in keeping with the spirit of the age and with the present trend of thought. Simultaneously with the increased financial vigilance of school boards and executives is observed more interest on the part of the general public as to the how, whence, whither and wherefore of school funds.

There are at least three reasons for the additional interest in adequate and systematic accounting of the school dollar: First, we are dealing with a better educated and more discriminating public than ever before; second, the financial distress of recent years has compelled more frugal expenditure along all lines and more attention to matters of taxation; third, from year to year the economic factor is becoming a more essential element in every type of educational administration.

I. THE NEW UNIFORM FINANCIAL ACCOUNTING SYSTEM

For these and other obvious reasons, it was deemed expedient to inaugurate the "Uniform Financial Accounting System." In the administration of the new system, it has not been our plan or purpose to revolutionize the methods in vogue for many years past. The idea has been rather to amplify and supplement some of the forms and methods already employed. It is apparent that a school board cannot satisfy the demands of the public or its own conscience by merely opening a "Cash Account" and keeping a record, however accurate, of receipts and disbursements.

The efficiency of any school system must be measured, so far as finances are concerned, by the same standards as those which determine the success or failure of any other business enterprise. The prime requisite, therefore, in placing our educational affairs on a sound financial basis and enabling the State Department and local boards to determine with ease and accuracy their exact fiscal status at any time, is manifestly a modern, systematic, comprehensive accounting system.

There has been a woeful lack of uniformity in the methods of accounting and reporting used by the various types of school districts. Much of this is due to different legal requirements, and is thus difficult to overcome without hearty cooperation of administrators and boards of education.

The new forms, while involving more labor, are designed to eliminate the many defects of the old and to provide educators and laymen a fund of information long desired and justly due. Some of these are discussed briefly below.

Uniform financial record book.—This book has been prepared, after a careful study of modern methods of accounting and a comparison of the systems employed in twelve other states. The State Department of Education furnishes a copy to every county, city and graded school board of education. The allocation of receipts and disbursements, as provided, is in harmony with the recommendations of the National Education Association, the United States Office of Education, and the usage of some of the best State school systems in this country. The detailed classification of receipts and disbursements affords a much more comprehensive grasp of the financial situation.

The budget.—The handling of all county and graded school budgets has been assigned to this Division. A comprehensive discussion of Budgetary Procedure, presented in the last Biennial Report, and a treatise now in course of preparation for general distribution to school boards, make it unnecessary to discuss here the principles of budget

making. Because of the inconsistencies in the laws, as applied to three distinct types of school districts and four classes of city schools, there has necessarily been too little uniformity of method or practice.

The long period of time over which county budgets are submitted to the State Board of Education for approval affords an example of striking irregularity.

The Statutes provide that:

"This annual school budget shall be submitted in writing to the county court clerk not less than ten days before the usual day for making the county levy"

It thus appears that fiscal courts, and not county boards, determine the dates of receiving budgets and making levies. In spite of continual efforts for several years to secure more uniformity of time, the record shows that forty-eight (48) counties—in filing their budgets for the past year—ranged from September, 1931, to September, 1932. The remaining seventy-two (72), however, submitted theirs in the two months of March and April.

To show that not too much blame should be laid upon the law, we present a few facts in regard to Graded Common School practices. The Statutes, more specific as to time, provide that:

"Each board of trustees (Graded Common School) shall each year not later than the last Saturday of May, prepare an annual school budget, and submit . . . to the State Board of Education for approval."

For the year 1931-32, these boards submitted budgets in thirteen different calendar months; and, for the year 1932-33, they covered a period of ten months. This would indicate, at least, some progress, if further scrutiny did not reveal that 52.7% of these boards failed to submit budgets within the legal limit of time the first year, while 60.1% failed the following year.

Although it has not been customary for city school districts to submit budgets, it now seems that there is no valid reason for such discrimination. Plans are being made and blanks prepared to seek the cooperation of all districts in securing more definite data as to financial plans and programs.

The working sheet of the budget.—As so many budgets are prepared, and, if in obedience to the letter of the law, must be prepared, before it is possible to obtain sufficiently accurate information for the year's program, the Division of Finance has prepared an operating budget, called a "Working Sheet". This form is so arranged that it may be used by all types of Kentucky school units. Thus a close estimate budget will be requested after July first of each year.

In the Working Sheet, the major functions are more elaborately subdivided in keeping with the various items and code numbers of the

new Financial Record Book. It is expected to enable local boards and the State Department of Education, through budget control monthly reports, to keep closer check on the financial affairs of all school districts.

A full discussion of the advantages of this supplement to the budget may be found in the Report of the Educational Commission, Chapter XI, or in the Handbook to be provided for those who are responsible for school funds.

Salary schedule.—There was a time when no effort was made to equalize, systematize or standardize the salaries of teachers. The State per capita was released, "as bread cast upon the waters"—without such absolute assurance of its beneficent results. For the past two decades there has been more or less effort to supervise and regulate the administration of teachers' salaries in county districts. However, the law does not yet specifically authorize the State Department or the State Board of Education to exercise supervision over salary schedules in city and graded school districts.

As more than three-fourths of the school revenue is expended for salaries, this phase of the financial program demands careful consideration. The Statutes, the regulations prescribed by the State Board of Education, and the forms prepared for the use of county boards are designed to give fair and equitable compensation to teachers on the basis of training, experience, attendance and teaching load. Adequate pay and satisfactory adjustment of salaries present a much more difficult problem at this period than for several years past.

We regret to report that too many county superintendents and boards of education defeat the purposes of the law by discriminating against some teachers in favor of others. We condemn the practice of giving large bonuses to high school principals and teachers for numerous unimportant extra-curricular activities—often entirely out of proportion to the service rendered.

Data taken from a recent study indicate wide differences in the salaries of elementary and secondary teachers: For the year 1931-32 the average salary of a high school teacher, in county districts was \$1195, while that of an elementary teacher was \$564. Salaries for the year 1932-33 were, approximately, 12% less than for the preceding year. The decrease of salaries in county districts was 19%.

Blank Forms.—An essential element in any system of uniform accounting is the adoption of reports and blanks of uniform size, type and form. The Division of Finance has prepared the following revised business forms: Order of Treasurer of Board of Education (Pay Roll) Form F-40; Treasurer's Monthly Report, Form F-45; Monthly Financial Report of Sheriff or Special Tax Collector, Form

F-60; Requisition Blank, Form F-65; Purchase Order, Form F-70; Claim Blank, Form F-75. The correct use of these forms will simplify the work of superintendents and secretaries and enable them to keep much more accurate and orderly records of all financial transactions, as well as to facilitate accuracy in the matter of bookkeeping in the State Department of Education.

II. GENERAL RECORD BOOK

Although not classified technically as a part of the financial Accounting System, the General Record Book is an essential factor in the administration of any school system. As most of these books furnished to county boards several years ago have been exhausted, it was deemed advisable to revise and reprint for county boards of education the new edition.

There has been continued improvement in the contents and general appearance of county superintendents' records, and we predict further improvement with the use of the revised Record Book.

III. AUDIT AND INSPECTION

Auditing and inspecting records and accounts of boards of education during the last two years of depression have revealed some very interesting and difficult problems. Revenues have declined and attendance has increased, requiring boards of education to house and teach more pupils with less money. This condition necessitates very careful planning of school budgets and watchful expenditure of money for all activities of the school program. Most boards of education are fully aware of their increased responsibility and are putting forth every effort to plan more economically than before. However, a few are resorting to haphazard practices and heaping unnecessary burdens upon the taxpayers. The new system will aid materially in putting them on a sound business basis.

Receipts.—Audit Reports prepared and filed in the Department of Education show that in most cases receipts have been properly entered in the financial record books. However, some boards of education have been careless in the matter of handling school revenues and have not made the proper entries or distribution of receipts.

Disbursements.—Disbursements in most cases have been legally authorized, entered and distributed under the proper captions of the financial record books, but some boards of education have been careless in handling their disbursements and have not shown due diligence in the exercise of their official duties in this matter. Numerous examples of this are revealed by audits and reports on file in the office of the State Department of Education.

Types of Districts Audited:

1. **Counties.**—Much time in auditing and inspecting has been spent on records and accounts of county boards of education, because (1) they have control of approximately two-thirds of all children enrolled in the schools, (2) the school laws are more specific with reference to the county schools, (3) they usually need more assistance in matters of bookkeeping and accounting.
2. **Cities.**—City systems do not require so much attention in matters of auditing and inspection, due to the fact that they usually have more funds for the employment of certified public accountants, whose services are available in such centers of population. Their audits are usually made at stated intervals and, in many instances, copies are forwarded to the State Department of Education.
3. **Graded Schools.**—A great many graded school boards of trustees are conducting the financial affairs of their systems in a fine business manner, and are to be highly commended, but our experience has shown that far too many of these boards are careless and negligent in the matter of keeping records of board meetings and transactions of their official business. Such districts should revert to the county systems. In fact, many of them are reverting either voluntarily or by action of the State Board of Education.

IV. OTHER FINANCIAL MATTERS

Bonds.—Only within the last three years did the State Board of Education take positive action in demanding adequate bonds to safeguard school funds. Now all types of Kentucky school districts are thus protected. Another function of the Division of Finance, therefore is the examination of bonds of school treasurers and depositories.

Adequate surety bonds are regarded as an absolute requisite of security of public school money. The inauguration of this procedure inspires confidence, restrains dishonest or careless handling of funds and facilitates the recovery of losses that might be incurred. We are pleased to report hearty cooperation from all types of school districts. For the past year every county, city and graded school district had a treasurer's bond, and only six districts in the entire state failed to report adequate depository bonds.

For the year 1932-33 there were submitted to the State Board of Education to safeguard school funds 540 bonds. Some of these were combined bonds for both treasurer and depository. They were of three distinct types: **personal**, **corporate** and **collateral**. Approximately, 60 per cent were personal, 30 per cent corporate, and 10 per

cent collateral. City systems have 42.9 per cent of their bonds personal; graded school districts, 62.1 per cent; and county systems, 71.2 per cent. The individual bonds range in amount from \$375 to \$250,000.

Indebtedness.—Much attention is now given to indebtedness of school districts. A recent study reveals some interesting facts. Kentucky's rating in the amount of outstanding school indebtedness, as compared with other states, is rather favorable. Yet, an unfortunate feature is the fact that at the close of the school year 1931-32 more than one-third of the school indebtedness was contracted in violation of Section 157 of the Constitution of Kentucky.

A schedule of payments for long-term indebtedness reveals that beginning in 1933 there will be an average of, approximately, \$400,000 due each year for the following fifteen years. A recent study shows the amounts of bonds redeemed in 1931-32 as follows: County, \$103,000; City, \$268,000; Graded, \$155,000. A table on temporary loans for the same year gives the following figures: County, \$1,206,000; City, \$710,000; Graded, \$202,000.

We have met with creditable response to our efforts to curtail such indebtedness and to diminish the unusually large amounts carried as current indebtedness.

Interest.—There has been too much variation in the rates of interest paid on bonds and loans. Bonds issued by popular vote usually have the lowest rates, while short-term loans draw the highest rates. Data from school boards show that interest rates on long-term indebtedness vary from 3% to 6%, while those on notes and warrants (short-term) carry from 4% to 8%.

It is found that temporary loans cost the taxpayer more than bonds and the above figures show that counties have more temporary loans than both city and graded school districts. This is not altogether the fault of county boards and superintendents. It is the result of unfavorable conditions. Due to the laws relative to taxation, county boards are called upon to spend a large proportion of their funds before they are received. To be specific, seven-tenths of their disbursements are due when only three-tenths of their funds have been received. As to rates of interest, there are fewer banks and less money to lend in the rural districts than in the cities.

These unfavorable conditions have sometimes resulted in more arbitrary rules and more exorbitant rates of interest charged for money.

V. MINOR ACTIVITIES

Handbook of instruction.—For the sake of uniformity and for the purpose of correcting some of the defects in the system, we have

begun the preparation of a manual to be designated, "**Handbook of Instruction**, for **Boards of Education**, **Administrators**, **Treasurers** and **Secretaries of Kentucky School Districts**". This will be published early in the coming school year and will purport to unify, simplify and systematize the keeping of financial records and to harmonize the practice and procedure of the various types of districts.

Taxpaying franchise corporations.—For the financial data on different school districts, we have prepared accurate detailed lists of taxpaying franchise corporations assessed in various counties by the State Tax Commission. These lists, giving names and assessments—have been copied from records in the Auditor's office, and have been found of inestimable value in checking budgets and advising local school authorities as to their prospective revenue from these sources.

War-Orphan scholarships.—Obedient to an act of the General Assembly of 1930, providing scholarships for children of deceased World War Veterans, the State Board of Education approves valid applications for scholarships in State educational institutions. Examination of these applications and also of vouchers becomes an additional activity of the Division of Finance.

General and special funds.—This Division has the responsibility of keeping correct account of the following funds:

General School Fund
Authorized Department Budget Fund
State Examination Fund
State Textbook Commission Fund
General Education Board Fund
Julius Rosenwald Fund
John F. Slater Fund
Anna T. Jeanes Fund

Claims, etc.—All bills, claims and expense accounts against the State Department of Education are referred to attaches of this Division for examination and recommendation for approval.

Mail handled.—A conservative estimate based upon records of the past six months gives the amount of mail handled per year by the Division of Finance as follows: Number of pieces, including occasional form letters, going out, 15,000; number of pieces received, 11,000.

Kentucky Educational Commission.—Supplementing the regular functions of this Division, all its members have from time to time made contributions to the work of the Kentucky Educational Commission and its various committees. It has been the pleasure of the Director to serve as a member of the Committee on Financing Public Education and as Chairman of the Subcommittee on Financial Administration.

Conferences and meetings.—We have attended the regular conventions of the Kentucky Education Association, several district educational meetings and the special superintendence conferences called by the State Superintendent of Public Instruction, and have taken part in their programs and discussions.

From time to time we have participated in staff meetings, committee meetings, and conferences with members of the Department and other educational leaders. More than 2,000 conferences were held in one year for the purpose of discussing official business.

At various times it has been necessary to attend meetings of the State Board of Education and to submit to them reports and recommendations pertaining to audits, budgets, salary schedules, bonds, etc.

Miscellaneous.—It is impossible to submit a report covering all activities of the past biennium. Much time, in and out of regular office hours, has been spent in preparing financial and statistical data for boards, administrators, institutions, committees and individuals.

All these duties have been performed cheerfully, conscientiously, and with an abiding interest in strengthening and stabilizing the fiscal affairs of our educational system.

PART III
STATISTICAL TABLES

**ENROLLMENT BY GRADE, RACE, AND TYPE OF SCHOOL DISTRICT—
1931-32**

Grade	County		City		Grd. School	State		Grand Total
	White	Col.	White	Col.	White	White	Col.	
Kindergarten			4,103	462		4,103	462	4,565
I	87,189	6,831	17,661	4,485	9,602	114,452	11,316	125,768
